

These low-power SLDs are developed specifically for customers looking for extremely broadband and extremely low rippled SLD for the most common communication bands. Devices are available at 1550 nm and 1450 nm center wavelengths.

Features:

- Low cost low power modules
- Flat spectrum with negligible residual Fabry-Perot modulation depth

Packages: DIL, BUT, others on request

Additional & customized:

- PD - monitors
- PM fiber pigtails, polarized/depolarized output
- FC/APC terminated pigtails

The following part numbers should be used when **ordering**:

SLD-761-LP-(c)-(d)-(f),
where:

- (c) – package type,
- (d) – SM (isotropic) or PM (polarization maintain) fiber,
- (f) – wavelength (1450 or 1550).

Example: SLD-761-LP-DIL-SM-1450.

Attention: peak wavelength is guaranteed within ± 10 nm upon specified. Each specific wavelength may be subject for availability. Devices rated to maximum 0.1 dB peak-to-peak ripple at full power are available upon request.

All specifications are subject to change without notice.

Applications:

- testing WDM/DWDM components
- fiberoptic metrology
- fiberoptic gyros
- fiberoptic sensors
- optical coherence tomography
- optical measurements
