

Superluminescent Diodes are semiconductor emitters combining the high brightness of laser diodes with a broad spectrum of LEDs. They are light sources of choice for numerous applications based on low coherence measurements, spectroscopy, low speckle illumination, and others.

Superlum offers a wide range of SLD modules and SLD-based light sources. Please also check our SLD controllers and light source modules to ensure safe and stable SLD operation in your system.

TYPICAL PERFORMANCE EXAMPLES

Light-current curve	Spectrum at rated power	Coherence at rated power
		
S670.10.1		
		
S670.8.5		
		
S670.7.10		
<p>Notes: examples demonstrate typical performance only. Actual performance may vary from sample to sample and from lot to lot. All specifications are subject to change without notice. Coherence function is measured by Michelson interferometer. Mirror displacement = Optical path difference / 2</p>		
<p>Attention: SLDs are sensitive to optical feedback. The higher is the power, the stronger is the sensitivity. All parameters are measured at optical feedback not exceeding 1E-3.</p>		

The following marking should be used for ordering:

P/N(type of fiber)

Examples : **S670.7.10S** – as rated above, SMF pigtail, FC/APC; **S670.8.5P** – as rated above, PMF pigtail, FC/APC.

MMF pigtailed SLDs are available upon request. Modules will be shipped FC/APC finished if not specified otherwise in the PO.
